

As Zebra Technologies
Premier OEM Integrator,
we provide... hardware,
software, value-add
engineering, and
integration of industry
leading Auto-ID solutions
for OEM manufactures.

We are...
Zebra Product Experts

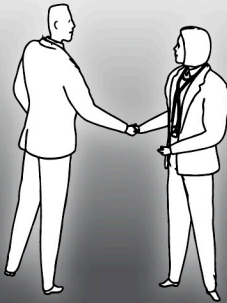

DOLPHIN
DATA CAPTURE

Zebra Technologies Premier OEM Integrator

From the Very Start to the End of Your Product Lifecycle... Dolphin is There

Dolphin Data Capture is a seasoned team of engineering veterans with extensive experience in Product Design, Software Engineering, Machine Vision, Specialized Lighting and Illumination. DDC provides complete integration from start to finish,

Dolphin Engineering services are seen as an investment we make to serve the greater partnership and shared goals for success.

We have over 25 years of experience working with Automatic Identification and Data Capture technologies. This means we provide the best hands on technical support and engineering design with complete integration services.

Customers can focus on what they do best.

These AIDC technologies include...

Barcodes - 1D, 2D

(including DPM applications)

1D-Linear

2D-Aztec

2D-PDF 417

2D-QR Code

2D-Data Matrix

RFID

(HF, UHF / Short and Long Range)

Machine Vision

(need to see more than barcode?)

Tube/Cap Presence...

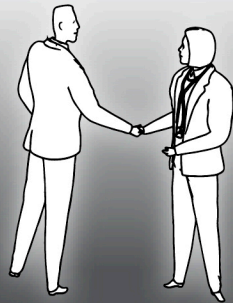

Special Markings...

...Or More?

The top 5 reasons to choose Dolphin as your OEM partner:

- 1) We are experts in Zebra's Industry-leading technologies.
- 2) Flexible OEM approaches to match your business strategy.
- 3) Utilize plug-and-play components or customize an existing Zebra product.
- 4) Reduce product development costs, let us solve the integration issues such as special mountings or interface requirements.
- 5) With Zebra and Dolphin as your technology partners, leverage your market position and expand your product offerings.

Engineering and Design
Software Engineering to Industrial Design...
At the core of Dolphin Data Capture's integration capabilities stands a team of expert engineers. Software Development, Electrical Engineering, Systems Design, Mechanical Engineering, Industrial Design and more.

Vision and Illumination
Difficult field of view, focal length or unique lighting challenges...

Dolphin engineering can modify Zebra imagers to overcome specific vision issues or facilitate special requirements.

Decoding and Machine Vision

Dolphin engineering can teach Zebra imagers to see more than just barcode...

Virtually any standard or even custom design barcode formats are within the range of detection by Dolphin engineers using Zebra imagers. If a Zebra image engine can see something then it is likely it can be taught to recognize it and execute specific functions. Just the opposite is true, Zebra imagers can also be taught to recognize when something that should be there, isn't.
